

**SCHOOLS BECOME SAFER.  
EVEN FOR THE FLOORS.**

**floorsafe<sup>®</sup>**

## FLOORSAFE® LEARNING INSTILLS MORE THAN JUST KNOWLEDGE.

Schools undergo constant change: new curriculum, students, and even furniture. But one constant remains: the floor.

The floor has to last for a long time and withstand continuous wear and tear, especially in the classrooms. Both the chairs and the students who sit on them, are hard on your floors, often leaving visible marks. As a result, repairs and replacements are costly.

A2S floorsafe® solves this problem. The properties of our innovative gliders are comparable with those of a high-performance sneaker:

- provide optimal distribution of pressure,
- silent and non-marking, and
- highly durable.

### ADVANTAGES

Protects the floor by providing complete glider contact with the floor.

Our components allow for safe tipping, without slipping.

Screws applied from the top.

- 1 Enlarged area of contact while tipped provide an intermediate buffer.
- 2 Screws applied from the top, which prohibit scratching.
- 3 Tread protection covers the pipe.
- 4 Large floor protectors are made of durable felt and plastic.

## VERSIONS

With felt: for linoleum and other smooth floors.

With plastic: for textile floor coverings.
